English | [Chinese](#)

Collect_dimaond's Page

Simple little homepage, had enough of the original one and made a new one

The logo font on the home page has been compressed, so if you use a font other than this logo, it will change back to the default font

Demo

Due to CDN caching, you may need **Ctrl + F5** to force a browser cache refresh to see the latest results

- [Collect_diamond's Page](#)
- [Backup](#)

Functions

- ☒ Loading animation
- ☒ Site description
- ☒ Hitokoto
- ☒ Date and time
- ☒ Live weather
- ☒ Time progress bar
- ☒ Music player
- ☒ Mobile adaptation
- ☐ Remove jQuery dependency
- ☐ VUE refactoring

Weather

Because the original weather API is unstable, the weather API has been replaced. Now you need to go to the following website to obtain the key

- to [ROLL] (<https://www.mxnzp.com/doc/list>) for app_id and app_secret, used to capture the city
- to [and wind weather] (<https://dev.qweather.com/>) to obtain the key, is used to get the weather information

It can also be replaced by other methods

Music

This project uses the **Aplayer** music player based on **MetingJS** for quick song list customization

*Only supported in **Mainland China**, please replace `music.js` with [the following](#) in other regions to enable the music player to work properly

Change the parameters of `music.js` to achieve a custom song list

```
let server = "netease"; //netease; tencent; kugou; xiami; kuwo;  
let type = "playlist"; //song; playlist; album;  
let id = "7452421335"; //album ID; song ID; playlist ID;
```

Fonts

Now using **HarmonyOS Sans** open source font, using font splitting to improve loading speed

Because this site's **CDN** has opened anti-leech, **non-site domain name is not accessible**, please change the font import link to the following content, otherwise **custom fonts will be invalid**

https://cdn.jsdelivr.net/gh/imsyy/file/font/HarmonyOS_Sans/regular.min.css

► old way

As Chinese fonts are introduced in this project, Chinese fonts need to be compressed to improve the loading speed of the page (you can also cancel the use of Chinese fonts)

Chinese font removal traditional

- Install **Python 3.7** and **pip**
- Run `pip install fonttools`
- Download [sc_unicode.txt](#)
- Run `pyftsubset font-name.ttf --unicodes-file=sc_unicode.txt`

fonts further compressed

- Compile and install **Google woff2**

```
sudo apt-get install -y git g++ make
git clone --recursive https://github.com/google/woff2.git
cd woff2
make clean all
```

- Compress the font again

```
. /woff2_compress . /font_name.ttf
```

- Eventually the original font can be slow loaded, **load the compressed font first**

For more information, please go to [虹墨空间站](#) to view the original article

Plugins

- [Bootstrap](#)
- [iziToast](#)
- [Font Awesome](#)
- [jQuery](#)
- [Aplayer](#)

API

- [MetingAPI By wuenci](#)
- [小歪 API](#)
- [和风天气](#)
